

Hamza Saeed

Deep Learning & AI Engineer · Blockchain & Web3 Developer

hhmza.m8@gmail.com | linkedin.com/in/hmzasaedd | github.com/hmzasaed | t.me/h8mzx |
+92 346 229 9839 | Lahore, Pakistan

PROFILE

Computer Science graduate with a strong foundation in deep learning and blockchain development, built through hands-on projects rather than theory alone. Experienced in training and fine-tuning neural networks, designing multi-agent AI systems, and building full-stack applications backed by smart contracts and secure authentication. Adapts quickly across the stack—from model development to backend and infrastructure—and is driven by a genuine interest in solving real problems with the right tools, not just the newest ones.

EDUCATION

Bachelor of Science in Computer Science · Lahore Garrison University Lahore | Dec 2022 – Jul 2026

- Relevant coursework: Deep Learning, Artificial Intelligence, Information Security, Software Engineering, Internet of Things, Computer Networks, Operating Systems

EXPERIENCE

Blockchain Development Intern · InternGrow Remote | Jul 2026 – Aug 2026

- Selected for a four-week immersive internship in the Blockchain Development track, engaging in applied projects under the **Learn · Build · Grow** mentorship framework.
- Applied smart contract and decentralized application development skills to real-world project scenarios alongside technical mentorship.

Community Ambassador · Deblock Remote | Sep 2022 – 2023

- Grew and managed an engaged blockchain community through AMAs, educational workshops, and consistent online presence.
- Forged strategic partnerships to expand Deblock's ecosystem reach and drive broader Web3 adoption.

AI & DEEP LEARNING PROJECTS

Multi-Agent AI Research Platform · Streamlit Cloud Remote | 2026

- Built a 4-agent autonomous pipeline (Search, Read, Write, Critique) using **LangChain** and Python to automate high-fidelity web scraping and information gathering.
- Designed a premium SaaS dashboard via Streamlit with custom CSS, featuring real-time telemetry execution logs, and automated multi-format compilation (**ReportLab** / **python-docx**).
- Reduced token overhead by 35% by developing a semantic data parser to prune boilerplate HTML DOM configurations from web sources before LLM context ingestion.
- Stack:** Python · LangChain · Streamlit · Tavily API · Gemini/Groq/OpenAI APIs · ReportLab · Git

- Developed a deep learning framework for automated brain tumor classification from MRI images using Vision Transformer (ViT) and Swin Transformer architectures.
- Applied transfer learning, image preprocessing, and data augmentation to improve model performance and generalization.
- Integrated Grad-CAM for Explainable AI to visualize model predictions and enhance interpretability.
- **Stack:** Python · PyTorch · Vision Transformer (ViT) · Swin Transformer · OpenCV · Scikit-learn · Grad-CAM

FINAL YEAR PROJECT

SeQuireChain — Blockchain-Based Evidence Management DApp · LGU Lahore | 2025 – 2026

- **Problem:** Digital evidence stored on centralized servers can be silently altered or forged, and password-based access offers no cryptographic proof of who submitted or approved a file.
- **Solution:** Built a DApp that anchors SHA-256 hashes of evidence files on Ethereum Sepolia via a custom `EvidenceManager.sol` contract, with files stored on IPFS (Pinata) for tamper-evident, content-addressed storage. Replaced passwords with MetaMask wallet-signature login for verifiable, non-repudiable authentication.
- **Results:** 100% blockchain confirmation rate · 100% tamper detection · ~22 s avg. upload · 50/50 concurrent uploads, zero failures.
- **Stack:** Solidity · Hardhat · Ethereum Sepolia · IPFS/Pinata · MetaMask · ethers.js · React Native · Expo · Node.js/Express · Firebase · SHA-256

TECHNICAL SKILLS

Deep Learning & AI (Primary): Python, LangChain, Generative AI APIs (OpenAI, Gemini, Groq)

Deep Learning & AI (Secondary): PyTorch, TensorFlow, Keras, Vision Transformer (ViT), Swin Transformer, CNNs, Agentic Workflows, Transfer Learning, Computer Vision, Explainable AI (Grad-CAM), OpenCV, Scikit-learn, Tavily API, BeautifulSoup

Blockchain & Web3: Solidity, Hardhat, Ethereum, IPFS, MetaMask, ethers.js, Smart Contracts, Tokenomics, Cryptographic Signatures, Contract Deployment & Unit Testing, CoinGate Integration

Full-Stack & Systems: Streamlit, React Native, Expo, Node.js, Express.js, Firebase, REST APIs, Git, GitHub

Tools & Technologies: Claude, Gemini, ChatGPT, Firebase, Google Colab, Codex, Antigravity, Google AI Studio, Hugging Face, Overleaf

Research & Strategy: Deep Learning Research, Project Management, Web3 Architecture Strategy, DeFi Ecosystem Analysis, Crypto-economic Models, Protocol Evaluation, Technical Trend Analysis, Prompt Engineering

CERTIFICATIONS

- Basics of Blockchain and web3
- Introduction to Decentralised Finance (DeFi)
